PROFILE

Full-stack developer with hands-on experience building and shipping production web applications using MERN and Django. Experienced in developing REST APIs, authentication and role-based systems, payment integrations, admin dashboards, database-driven applications, and automated backend workflows.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, React.js, Next.js, Node.js, Express, Nest.js, Django, HTML5, CSS3, Tailwind CSS, MUI

Databases & Infra: MongoDB, PostgreSQL, Redis, Git/GitHub, Vercel, AWS

Payments: Stripe, PayPal, Flutterwave, M-Pesa Daraja

EXPERIENCE

Global Policy House (GPH) — Junior Backend Developer

February 2026 – September 2026 | Nairobi, Kenya

Kingdom of Kush

- Developed backend systems using Django and PostgreSQL for passport and citizenship application forms, including application submission, data processing, and administrative management.
- Built backend functionality supporting an admin dashboard for managing application data and records.
- Developed an event booking system with Stripe, PayPal, and Flutterwave payment integrations.
- Implemented asynchronous/background processes using Celery and automated email communication using Resend.

Global Policy House Official Website

- Developed and maintained the Django backend for the official GPH website using PostgreSQL.
- Implemented event registration and booking functionality with Stripe, PayPal, and Flutterwave.
- Developed backend functionality supporting an admin dashboard for managing registrations and website data.
- Implemented automated email notifications using Resend and background task processing with Celery.

Zambia International Investment Summit

- Developed backend functionality using Django and PostgreSQL for event registration, payment processing, and administrative management.
- Integrated Stripe, PayPal, and Flutterwave payment gateways.
- Implemented separate registration and approval workflows for VVIPs, standard delegates, and press.
- Developed admin functionality for managing registrations, approvals, and participant data.
- Implemented automated email notifications using Resend and asynchronous tasks with Celery.

GSDA Summit

- Developed the backend using Node.js, Express, and PostgreSQL for an event registration platform that processed 467 total registrations across 3 delegate tiers (VVIP, standard, press), each with a distinct approval workflow.
- Implemented registration, volunteer registration, contact forms, and attendee check-in functionality.
- Developed an admin dashboard for viewing statistics, managing registrations, downloading registration data, and approving/rejecting VVIP applications.
- Automated check-in status updates and transactional emails (via Resend) across registration, contact, and volunteer forms, removing manual check-in tracking on event day.
- Built an admin dashboard with live analytics (gender, age, student/employment breakdowns) and bulk VVIP approval/rejection tooling.

Power Learn Project (PLP) - Volunteer MERN Stack Co-Instructor & Technical Support

June 2025 – July 2026 | Nairobi, Kenya

- Worked as part of the technical support team, responding to learner queries through email and helping resolve technical and course-related issues.
- Co-instructed the MERN Stack course, supporting instructors during live sessions and helping learners understand and apply concepts through practical coding sessions.
- Contributed to the development and improvement of MERN Stack course content, helping structure technical material and learning activities for learners.
- Conducted additional coding, revision, and trivia sessions to reinforce concepts covered during the main lessons and give learners opportunities to practise what they had learned.
- Reviewed and assessed learner assignments and projects, providing technical feedback on implementation, code quality, and problem-solving.
- Participated in code reviews and guided learners in improving their solutions and development practices.

M-Treat Organization - Web Developer Intern

March 2025 – May 2025 | Nairobi, Kenya

- Developed the Django backend functionality for the contact form to process submissions and send email notifications to users.
- Implemented the React API integration for submitting contact form data to the Django backend.
- Developed the Django newsletter backend to process subscriptions and send email notifications to subscribers.
- Implemented error handling for newsletter subscriptions and email notification workflows.

SELECTED PROJECTS

StayEasy - Full-Stack Rental Booking Platform

Next.js, NestJS, MongoDB, M-Pesa Daraja, WebSockets, Cloudinary, Resend

- Built a full-stack property rental platform enabling users to browse properties, check availability, make bookings, and complete M-Pesa payments.
- Integrated Safaricom M-Pesa Daraja STK Push with asynchronous callback handling to automatically update booking and payment status.
- Implemented JWT authentication and role-based access control with separate guest and admin dashboards.
- Designed an automated booking lifecycle with booking conflict prevention, payment deadlines, and scheduled expiry of unpaid bookings.
- Built an admin dashboard for booking management, customer activity, and analytics, and implemented real-time review updates using WebSockets.

AgriGrow Farms - Farm Management System

Django, PostgreSQL

- Built a farm management system to manage workers, tasks, and worker payments.
- Implemented three user roles — administrators, managers, and workers with role-specific dashboards, permissions, and access to relevant farm data.
- Implemented automated worker account creation by administrators, with login credentials sent directly to newly created users.
- Designed backend workflows for assigning and tracking tasks, managing worker information, and recording payments.

Baobab Restaurant - Restaurant Management Website

MERN Stack, React, Node.js, Express, MongoDB

- Designed and developed a responsive restaurant website for showcasing menus, restaurant information, and other content.
- Built an admin dashboard that allows administrators to manage website content without manually modifying the frontend.
- Connected the admin dashboard to the public website so changes to managed data are automatically reflected on the website.
- Implemented responsive UI and structured the application for maintainable content management.

Jay Foundation - Charity Website

Django, React, Bootstrap, M-Pesa

- Designed and developed a responsive website for a charity organisation to present its programmes and support online engagement.
- Integrated M-Pesa payment functionality to enable online donations.
- Built the frontend using React and Bootstrap and connected it to Django backend functionality.
- Applied responsive design and clear user flows to improve accessibility and ease of use.

EDUCATION

Jomo Kenyatta University of Agriculture and Technology (JKUAT)

Bachelor of Business Information Technology

TRAINING & CERTIFICATIONS

- Power Learn Project (PLP) — Full Stack MERN Stack Training (Feb–Jul 2025)

- eMobilis — Django Web Development Program (Oct–Dec 2024)
- She Codes Foundation — Frontend Development (Nov 2023–Mar 2024)
